

Missed Call Alert System

The Missed Call Alert System allows users to pull any information data or give a input choice just by giving a Missed Call.

Components of the System

1. A GSM sim card enabled hardware.
2. Web base software.

How it works

Applications

1. Survey/voting.
2. Complaint booking.
3. Registration/unregistration requests.
4. Pull information like cricket score etc.

Features

1. Single Hardware box solution with web base software.
2. Records the details of all missed call with time and number in the database.
3. Allows automated action like sending email, sms or some information back to the user on missed call event.
4. System can exchange data with other online system using database or excel file.

Benefits

1. Allows to provide information to customer at zero cost.
2. Can be used for different applications.

Communicate with Zero Cost
